PAST EVENTS

The Fifth World Congress - June 7th to 12th, 1998 - Stockholm, Sweden

Organised by the Environmental Health Officers’ Association of Sweden.

The fifth World Congress can certainly be considered an international conference with delegates from 31 different countries. Everyone in attendance was extremely grateful for the hospitality extended to us by the Swedish Environmental Health Officers Association. Once again, we took the opportunity to greet old friends and, just as important, make new friends and new contacts. I am sure that networking between individuals and organisations represented will certainly improve as a result of this conference. The Organising Committee, ably led by the tireless Kia Regner, are to be congratulated for all their hard work and endeavours to ensure such an enjoyable and memorable conference.

Editor

IFEH Council Meeting - June 6th to 7th, 1998 - Stockholm, Sweden

The following decisions were taken at the meeting:

1. A postal ballot is to be held to consider the recommendation that subscriptions should remain at £50 per organisation but the per capita fee should be increased to 18p per member.

2. The German Federal Association of Food Control Inspectors and the Association of Public Health Inspectors, Greece, were accepted as full members.

German Federal Association of Food Control Inspectors
Contact - J. Hohenleitner, Bismarck Strasse 49, 53721 Siegburg, Germany. Phone: (Home) +49 2241 67608. Fax: (Home) +49 2241 591737. Phone (Office) +49 2241 132581. Fax: (Office) +49 2241 133479.

OBITUARY

It is with considerable regret that I have to advise IFEH colleagues of the death of Haji Sulaiman, advisor to MAEH on the 18th July. Haji was held in high esteem both in the IFEH as well as the MAEH and we will miss his friendly nature and sincere contributions. At this time our thoughts and condolences go to his family, friends and colleagues in MAEH.

The Association of Public Health Inspectors, Greece, Gladstonos 10, Athens, 10677, Greece. Contact - Ms Maria Vargiro Spapou, (Secretary), Erasistratou 8, Str, Agios Artemios, Athens, Greece. Phone: +00301 3302069. Fax: +00301 3302079.

3. The City College, Norwich (England) was accepted as an Academic Associate Member. Contact Dr. Michael Howard, B.Sc., (Environmental Health), Course Leader, Ipswich Road, Norwich, NR2 2UJ. Phone: +44 (0)1603 773414. Fax: +44 (0)1603 663017.

Welcome to all our new members - Editor.
4. The Northern Ireland Centre of the CIEH, which sponsors the IFEH membership of CHAMATA (the Tanzanian Health Officers Association), has sent a delegate (Stewart Petrie) to Dar es Salaam to assist in developing a Degree Course at the University.

The Mission is undertaken in memory of Clarence Phenix, a stalwart of the Northern Ireland Centre who is also fondly remembered in Tanzania where he worked to great effect.

It was reported by John McCandless that thanks to the sterling work of Stewart, it is now most likely that the first students will be enrolled in September, 2000.

5. Endorsement of Food Hygiene Training Certificates

The Council supported the endorsement of food hygiene certificates by the IFEH for both member and non-member organisations who were responsible for organising food hygiene courses.

The Public Relations Officer agreed to lead a small working group of persons experienced in organising and validating basic food hygiene courses/examinations with the intention that he would report back on the criteria to be used to secure endorsement.

The Public Relations Officer would be very pleased to hear from anyone who has such experience and/or documentation/criteria used by member organisations to determine approved courses/training centres/tutors. The Public Relations Officer would also be pleased to hear from any organisation that would be interested in receiving the endorsement of the IFEH so that details can be reported back to the IFEH Council (via the Finance Working Group).

6. Birgit Haglund from Umeå University, Sweden has taken over the Chair of the International Faculty Forum.

Congratulations, Birgit - Editor.

The IFEH has appointed John Stirling as Education Liaison Officer who will be responsible, amongst other things, for dealing with policy and liaison with the Faculty Forum.

7. The IFEH will co-operate with the Dublin Institute of Technology, (a Collaborating Centre for the World Health Organisation’s Euro-Region) to produce and disseminate position papers on topics that are germane to the career activities of Environmental Health professionals. Papers to include:

- Concept of a profession
- Professional development
- Operational issues for professional organisations
- Codes of professional conduct
- Environmental health research
- Current and emerging issues in environmental health
- Trends in environmental health education
- Environmental health in context
- Communications in environmental health

8. The IFEH President for 2000 will be Lars Olson (Norway)

The IFEH President for 2002 will be Diane Evans (USA).

Congratulations to Lars and Diane - Editor.

9. A formal bid was made, and accepted, for the South African Institute of Environmental Health to host the Eighth World Congress on Environmental Health in Durban, South Africa. (An excellent presentation was made to the Council by Messrs S. Mudaly, Z. Zincume and J. Chaka).

Congratulations to the SAIEH - Editor.

Caring for the Environment in the Interest of World Health
10. IFEH officers appointed:

President - Kia Regner (EHOAS)
Chair - Bryn Jones, (CIEH)
Vice-Chair - Vic Andrich (AIEH)
Secretary - Michael Halls (REHIS)
Treasurer - Graham Slee (CIEH)
Public Relations Officer - Richard Sprenger (IFEH)
Co-ordinating Officer - Eric Foskett (IFEH)
Archivist - Michael Halls (REHIS)
Education Liaison Officer - John Stirling (REHIS)
Company Secretary - Michael Cooke (CIEH)

11. It was agreed that the Co-ordinating Officer should produce an IFEH yearbook free of charge (i.e. sponsorship required). In future years it is intended, if practicable, to combine the yearbook with the IFEH Annual Report.

12. Two new policy statements were agreed, Policy Statement No. 5 confirming the IFEH opposition to smoking; Policy Statement No. 6 confirming the right of access for everyone to a clean, affordable water supply.

13. It was agreed to produce the IFEH Directory on disk.

14. It was agreed to progress the possibility of producing an IFEH Journal. The journal would initially be published twice a year and may be combined with this newsletter. (Volunteer editors - John Stirling and Kenneth Stewart)

15. The Council accepted an offer from Peter Ku to hold the next IFEH Council meeting in Hongkong - probably in April, 1999.

---

**FUTURE EVENTS**

**Residential Seminar in Scotland**

The IFEH and the British Council are supporting a residential seminar at the Strathclyde University Business School - 21st to 26th March, 1999. The seminar is to have a maximum attendance of 40 persons so as to assist learning outcomes. One of the main themes will be "communications". It is intended for Environmental Health professionals from outwith the U.K. Further details available from Michael Halls.

**Sixth World Congress**

Healthy Environments - "A Local Challenge" 5th to 9th June, 2000. Oslo, Norway.

**Seventh World Congress**

Environmental Health - "A Universal Responsibility" 21st to 26th April, 2002. San Diego, California.

**AIEH National Conference**

The Australian Institute of Environmental Health’s 25th National Conference will be held in Surfers Paradise, Queensland from 25th to 30th October, 1998.

Organiser: AIEH Qld. Div., PO Box 2222, Fortitude Valley, BC Q4006 Australia.
Policy Statement No. 5

1. The International Federation of Environmental Health (IFEH) accepts the medical and scientific evidence that smoking is harmful to human health and that the nicotine contained in tobacco is addictive. Further the IFEH accepts that passive smoking, which is air polluted by the exhalations of other smokers, can be as harmful as smoke inhaled directly by a smoker.

2. The IFEH calls on the Members to:
   
a) Invite their Governments to endorse the view expressed in 1 above;

b) take steps to suggest everyone's right to breathe smoke-free air;

c) ensure that their respective organisations endorse the views expressed in 1 above and

d) support campaigns designed to provide smoke-free public places.

3. The IFEH supports the abolition of governmental subsidies for tobacco growing. Where this might cause rural poverty, governments must take appropriate mitigating action.

4. The IFEH promotes non-smoking and deplores activities which encourage young people to take up smoking.

5. The IFEH recognises the rights of individuals to smoke in private but not the right to inflict tobacco smoke on others.

6. The IFEH itself hereby adopts a policy of not permitting smoking by members, officers or observers at any of its meetings or official functions.

---

Policy Statement No. 6

The International Federation of Environmental Health (IFEH) believes that water is an essential public service and that access to a clean and affordable supply of drinking water must be regarded as a fundamental human right.

The Federation also believes that there should be actions to ensure that sewage is disposed of in a safe efficient and environmentally friendly manner.

To achieve these aims, the Federation calls upon all Governments to lay down realistic targets for reaching such a situation and encourages all its Member organisations to take such action as each considers appropriate to assist in attaining these goals.

For its part, IFEH will give support in whatever way possible and lend assistance to such countries where such targets need the injection of resources which may be in short supply.

The Federation also calls on International Agencies to do all that they can to help achieve a situation where everyone has access to a safe water supply and an adequate sewage disposal system within the first decade of the new Millennium.

ADOPTED AT THE FIFTH WORLD CONGRESS ON ENVIRONMENTAL HEALTH HELD IN STOCKHOLM, SWEDEN IN JUNE, 1998.

Caring for the Environment in the Interest of World Health
DOES CURRENT PUBLIC HEALTH LEGISLATION PROTECT THE ALLERGIC CONSUMER?

(Abstract of a paper presented by Ian Leith at the 5th World Congress of the International Federation of Environmental Health - 7th to 12th June, 1998 Stockholm, Sweden.)

Food allergy has in the past been variously regarded as part of fringe medicine or attracting the attention of the popular press and less academically rigorous medical journals. As the evidence accumulates, however, clinical reactions to food allergic and non-allergic are now recognised as being of considerable importance. To date most academic students have concentrated on the clinical methodology of diagnosis and the incidence of allergic disease, much less attention has been invested in the public health aspects of this form of illness.

While practically all developed countries have enacted legislation to protect consumers from harm associated with the consumption of contaminated food, this legislation was not constructed primarily to deal with food allergies and is ineffective in protecting consumers from allergic reactions to food, however, this is the only legislative framework available and in the absence of more suitable legislation, it provides the only statutory means within which Environmental Health officers may monitor and control the wide range of manufacturing and retailing food industries.

While many allergic reactions are confined to a range of trivial if uncomfortable symptoms including skin reactions, some consumers exhibit much more severe reactions. One of these anaphylaxis is a life threatening condition the onset of which occurs very rapidly on consumption of the allergen. The symptoms include rapid swelling, nausea, hypertension, shock, collapse and death. Such symptoms can be reversed or suppressed by the rapid administration of adrenaline by intra-muscular injections in a clinical environment. However, several deaths per year can be attributed to this food mediated condition. The onset of the condition is by its nature rapid, severe and unpredictable, timely medical intervention cannot be ensured thus efficient control strategies will require public health measures rather than clinical remedies.

In 1996, 22 people died from E-coli 0157 food poisoning, since 1993 at least 6 people have died each year in the UK from anaphylaxis induced by accidentally eating foods to which they were known to be allergic.

To date my study has involved an investigation of peanut allergy, one of the most potent allergies and one frequently responsible for many food mediated allergic reactions. I have outlined the scale of the problem, the role played by the medical profession in the clinical management of food allergy, the limited role of the environmental health profession in the monitoring and control of food related allergies in the UK and strategies for consumer protection and evidence of peanuts and peanut containing foods. As such this study has been preliminary in nature and formed the basis for a much larger international investigation. The international investigation will require the assistance of members of the International Federation of Environmental Health to gather information and provide data and opinions on allergy monitoring and control in other member countries. This networking will facilitate the comparison of modes of best practice and may allow a consensus of opinions to be derived. From this a concerted and focused methodology may develop which may enable this apparently intractable problem of food mediated allergic reactions to be effectively and efficiently controlled. Ultimately legislation and practice will need to be modified, this study may indicate the best direction in which the control measures should evolve.

CALL FOR RESEARCH HELP

Anyone who is either an Environmental Health Officer or Trading Standards Officer working in the UK in food control (Food Hygiene, Food Standards) or an Environmental Health professional in any country associated with the International Federation of Environmental Health is invited to contact me by any of the methods below to register their interest in receiving a sample questionnaire.

Ian Leith, Senior EGO, (Food Control), Environmental Health Department, Omagh District Council, The Grange, Mount Joy, Omagh, County Tyrone, Northern Ireland.

PROFESSIONALISM

Professionalism to me means several things. It’s performing our jobs the best way we can and keeping our minds open to opinions which may be contradictory to our own. Professionalism is expressing our opinions and thoughts in a constructive manner - not antagonistically or accusatorily. Professionalism is fulfilling our responsibilities, whether they are work responsibilities or CEHA responsibilities. It’s about having integrity. It’s about following a code of ethics. It’s about taking responsibility for our own actions or inactions. It’s learning from our mistakes and moving forward. It’s about offering constructive criticism. It’s about being civil to each other. It’s about not becoming defensive if someone disagrees with you. It’s about keeping the big picture in your mind and helping others to understand why we do the things we do. It’s keeping level-headed and looking at all the facts and circumstances when making a decision.

ITEMS OF INTEREST

ARE YOU WASHING YOUR HANDS

A company in the USA has produced a gadget which is worn by food handlers to assist in good personal hygiene. Failure to wash the hands properly when required, results in a beep and a message sent to the manager’s computer.

---

THE WHITE HOUSE AND FOOD POISONING

WHO has advised that the number of food poisoning cases may be 350 times higher than those reported. The White House was so concerned over the high incidence of food poisoning in the USA that the President asked Congress for 60 million dollars to fund a National “early warning system” to fight outbreaks of food contamination which kill about 9,000 people a year.

---

DECLARATION OF WESTPORT

Sweden has now been admitted to the work exchange programme. Irene Kempton, a Local Agenda 21 Co-ordinator in the Southern Group was the first Northern Ireland Environmental Health Officer to take advantage of the work exchange opportunities offered through the Declaration of Westport. Subsequently Stephen Cooper visited Norway in May to study fish processing.

PUBLIC HEALTH INTERNATIONAL

PHI is a non-profit agency based in the USA and dedicated to the prevention of death and disease in disaster and refugee settings through the implementation of basic low cost public health programmes. PHI also conducts public health development projects with indigenous populations in developing countries. It operates by recruiting and training public health volunteers who empower refugees to take action by developing basic public health skills. PHI believes that nutritional therapy, medical care and sanitation are interdependent elements of a comprehensive health care programme. PHI was established in 1984 by Roy Baker, Dick Swenson and Terry Rahe, all public health professionals who had served as volunteers in Thailand. Since its formation, PHI has served with distinction in at least 50 countries. Volunteers develop water treatment and refuse collection systems and may be involved with latrine construction, oral rehydration, malnutrition identification, immunizations, epidemiology and health education.

ZIMBABWE

Training and development of Environmental Health Practitioners in Zimbabwe

ZEHPA recently completed negotiations for further training of its members who consist of Environmental Health Technicians (EHTs) and Environmental Health Officers.

A bridging course for EHTs to Higher National Diploma (HND) was developed during 1996 and 1997 by the Association and the Ministries of Higher Education and Technology, and Health and Child Welfare. The bridging course covers the following subjects which were identified as deficient in the present EHT Curriculum:

- Meat Hygiene
- Environmental Health Practice
- Microbiology
- Physics/Chemistry

The first class of 10 students started the 12 month full-time bridging course at Bulawayo Polytechnic on Monday, 12th January, 1998. The same Polytechnic also runs the conventional HND course.

The second programme which ZEHPA members have benefitted from is a 2 year Bachelor of Technology Degree in Environmental Health by Distance Education through Pretoria Technikon in the Republic of South Africa.

Thirty-six HND holders enrolled for the course which started with the first contact session in Pretoria on 26th and 27th January, 1998. The course is the first step in the implementation of a co-operation agreement signed between the Technikon and ZEHPA in August, 1997. The co-operation agreement also covers exchange of guest lecturers and students, mutual assistance in the development of educational material and special courses, and exchange of research work.

The Association is grateful to the respective institutions of higher learning that have shown a keen interest in these training programmes. We are also grateful to those IFEH member organisations which responded positively to our appeal for textbooks to support the above initiative.

Abednego Chigumbu M Med, Ed (Dundee). President of the Zimbabwe Environmental Health Practitioners (ZEHPA).

Caring for the Environment in the Interest of World Health
Merging sustainable development
Sustainability has emerged as an important new qualification for environmental infrastructure projects, particularly on the fast-growing and environmentally undeserved US/Mexico border. The Border Environment Co-operation Commission and the North American Development Bank respectively charged with approving and financing environmental projects on the border have determined six National areas in which sustainability plays a role: natural resource management; technical efficiency; natural resource preservation; environmental protection; benefits to low income residents; and community participation. The Naco Constructed Wetland/ Microenterprise proposal which would build a demonstration-scale constructed wetland for waste water treatment and train community members in three associated microenterprise projects, creatively demonstrates how principles of sustainable development are expressed in actual project implementation.
